Challenge #188: Difficult, but not im-parse-able

A solution to last week's challenge can be found [here](#)!

This week's Challenge come to us from [@T_Willins](#)!

Your tax group has advised you that the information they need is available only in a .TXT report. To properly import the data into a subsequent system, they need the data filtered and in a specified format.

First, match the ID no. from the totals rows to the corresponding detail lines. Then filter to only detail rows with a tax codes of P1 or P9. Format, sort order and field names on the output file must match the given output for the file to load correctly.
