Challenge #221: Avocado Consumption

A solution to last week's challenge can be found [here](#).

Love them or hate them, Avocados are a popular food that have been increasing in popularity. Did you know that they are technically a berry?

At any rate, this week's challenge is to find the regions with the largest increase (by percentage) of avocado consumption for [total volume] and each PLU code. PLU codes are the 4 digit codes which classify produce in retail stores. The final output should include both conventionally grown and organic results.

Nice problem. I don't think my solution is particularly elegant, but it gets the job done, which is the most important part.
