Challenge #262: With-invoice

A solution to last week's challenge can be found [here](#).

This week's challenge was submitted by [@phottovy](#) - Thanks for your submission!

After using Alteryx for a while now, you are starting to feel like your company's parsing all-star, or Par-Star as you call yourself, a term that hasn't caught on within your department for some reason. Knowing full well how confident you are in your abilities, your boss comes to both you and your work nemesis from a rival department with a report from a new external source and asks both of you to clean it up and extract the relevant information. Will you be able to keep your self-imposed status on your team or will you have to hand over your championship belt (also self-made) to someone else? You better get started!

ZZZZ 0000

Functional Currency: USD

Report Example

Reporting Level : Fake Unit

Reporting Context : TR AUTO-PM

Set of Books Currency : USD

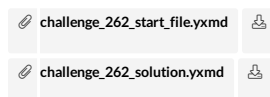

Company Segment Low : 9876

Company Segment High : 5432

Fun challenge. Hard part was trying to pull the column headers out dynamically and trying to produce a generalized solution.
