Challenge #121: World Cup 2018!

JoeM
Alteryx Alumni (Retired)

Last week's solution can be found HERE!

Let the games begin...the World Cup games, that is! For this Week's Challenge, we're going to list the scheduled matches for the 2018 World Cup. Create a workflow to parse the input data to create a sorted list (by date) of the scheduled matches and their locations, as well as the host stadium's capacity of cheering fans. There's plenty of room for creativity with this one, from reporting to app building, so feel free to make it your own!

I'm looking forward to some RegEx solutions that don't use so many Text-to-Columns tools.

I had to time box this one, practicing for the certification exams, for some crazy reason, my RegEx ^\d* worked on all but the parse choice so, I took the lengthy text to columns path. My not elegant but correct solution.

My version, same problem, some regex would have made it a lot cleaner but quite challenging, nice one !

Here's what I've got. Lots of fun Regex opportunities! I'm interested in seeing who can make theirs the shortest.

My solution! With a special shoutout to @MarqueeCrew. I have learned the error of my non-Expect-Equal-Tool-using ways. :)

My first entry. A little long, but I will get there.

My first weekly challenge! Long, and no regex. Hopefully can only do better in the coming challenges.

A bit brute force at times and not as elegant but definitely gets there!
